Amendments to the Claims:

Please amend the claims as follows. This listing of claims will replace all prior versions and listings of claims in the application:

Listing of claims:

- 1-8. (Cancelled)
- 9. (Currently Amended) Catalyst for water electrolysis, comprising iridium oxide and an high surface area inorganic oxide, wherein the inorganic oxide has a BET surface area in the range of 50 to 400 m²/g and is present in a quantity of less than 20 wt.% based on the total weight of the catalyst.
- 10. (Previously Presented) Catalyst according to claim 9, further comprising ruthenium oxide in an amount resulting in an Ir / Ru-atomic ratio in the range of 4/1 to 1/4.
- 11. (Currently Amended) Catalyst according to claim 9, wherein the inorganic oxide is selected from the group consisting of titania (TiO₂), silica (SiO₂), alumina (Al₂O₃), zirconia (ZrO₂), tin dioxide (SnO₂), doped tin oxide (SnO₂/F), ceria, CeO₂/ZrO₂, niobium pentoxide (Nb₂O₅), tantalum pentoxide (Ta₂O₅) and/or combinations thereof.
- 12. (Currently Amended) Catalyst according to claim 10, wherein the inorganic oxide is selected from the group <u>consisting</u> of titania (TiO₂), silica (SiO₂), alumina (Al₂O₃), zirconia (ZrO₂), tin dioxide (SnO₂), <u>doped tin oxide (SnO₂/F)</u>,ceria, <u>CeO₂/ZrO₂</u>, niobium pentoxide (Nb₂O₅), tantalum pentoxide (Ta₂O₅) and/or combinations thereof.
- 13. (Currently Amended) Catalyst according to claim 9, wherein the water solubility of the inorganic oxide (as determined according to EN ISO 787, part 8) is lower than 0.15 g/l, at 20°C.

- 14. (Previously Presented) Catalyst according to claim 9, wherein the water solubility of the inorganic oxide (as determined according to EN ISO 787, part 8) is lower than 0.05 g/l at 20 °C.
- 15. (Currently Amended) Catalyst according to claim 10, wherein the water solubility of the inorganic oxide (as determined according to EN ISO 787, part 8) is lower than 0.15 g/l, at 20°C.
- 16. (Currently Amended) Catalyst according to claim 11, wherein the water solubility of the inorganic oxide (as determined according to EN ISO 787, part 8) is lower than 0.15 g/l, at 20°C.
- 17. (Currently Amended) Catalyst according to claim 9, wherein the iridium oxide comprises iridium(IV)-oxide, iridium(III)-oxide and/or mixtures thereof.
- 18. (Currently Amended) Catalyst according to claim 10, wherein the iridium oxide comprises iridium(IV)-oxide, iridium(III)-oxide and/or mixtures thereof.
- 19. (Currently Amended) Catalyst according to claim 11, wherein the iridium oxide comprises iridium(IV)-oxide, iridium(III)-oxide and/or mixtures thereof.
- 20. (Currently Amended) Catalyst according to claim 12, wherein the iridium oxide comprises iridium(IV)-oxide, iridium(III)-oxide and/or mixtures thereof.
- 21. (Withdrawn) Process for the manufacture of the catalyst according to claim 9 comprising the steps:
 - a) dissolving the iridium and optionally the ruthenium precursor compound in the presence of an inorganic oxide in an aqueous solution and
 - b) precipitating the iridium oxide (optionally in combination with the ruthenium oxide) by adjusting the pH of the mixture in the range of 6 to 10,
 - c) separating and drying the catalyst,

- d) heat treating the catalyst at temperatures in the range of 300 to 800 °C.
- 22. (Withdrawn) Process for the manufacture of the catalyst according to claim 10 comprising the steps:
 - a) dissolving the iridium and optionally the ruthenium precursor compound in the presence of an inorganic oxide in an aqueous solution and
 - b) precipitating the iridium oxide (optionally in combination with the ruthenium oxide) by adjusting the pH of the mixture in the range of 6 to 10,
 - c) separating and drying the catalyst,
 - d) heat treating the catalyst at temperatures in the range of 300 to 800 °C.
- 23. (Withdrawn) Process for the manufacture of the catalyst according to claim 11 comprising the steps:
 - a) dissolving the iridium and optionally the ruthenium precursor compound in the presence of an inorganic oxide in an aqueous solution and
 - b) precipitating the iridium oxide (optionally in combination with the ruthenium oxide) by adjusting the pH of the mixture in the range of 6 to 10,
 - c) separating and drying the catalyst,
 - d) heat treating the catalyst at temperatures in the range of 300 to 800 °C.
- 24. (Withdrawn) Process for the manufacture of the catalyst according to claim 12 comprising the steps:
 - a) dissolving the iridium and optionally the ruthenium precursor compound in the presence of an inorganic oxide in an aqueous solution and

- b) precipitating the iridium oxide (optionally in combination with the ruthenium oxide) by adjusting the pH of the mixture in the range of 6 to 10,
- c) separating and drying the catalyst,
- d) heat treating the catalyst at temperatures in the range of 300 to 800 °C.
- 25. (Withdrawn) Use of the catalyst according to claim 9 as anode catalysts in electrodes, catalyst-coated membranes (CCMs) and membrane-electrode-assemblies (MEAs) for PEM water electrolysers.
- 26. (Withdrawn) Use of the catalyst according to claim 9 in regenerative fuel cells (RFC), sensors, electrolysers and other electrochemical devices.
- 27. (Withdrawn) An article of manufacture comprising the catalyst according to claim 9 as an anode catalyst in an electrode.
- 28. (Withdrawn) A membrane (CCMs) coated with the catalyst according to claim 9.
- 29. (Withdrawn) A membrane-electrode assembly (MEAs) for REM water electrolysis containing the catalyst according to claim 9.
- 30. (Withdrawn) An article of manufacture selected from the group consisting of a regenerative fuel cell (RFC), a sensor and an electrolyser containing the catalyst according to claim 9.
